1. Prerequisites

- Docker Desktop installed and running
- .NET 9 SDK
- Git
- VS Code or other editor
- Access credentials (DB password, etc.)

2. Installation

```
git clone https://github.com/YourTeam/ims.git
cd ims
.\install.ps1 # On Windows PowerShell
# or
./install.sh # On Linux/macOS
```

3. Uninstallation

```
.\uninstall.ps1
# or
./uninstall.sh
```

4. Quick Start

```
docker-compose up
# Access at http://localhost:PORT
```

5. Feature Walkthrough

5.1. Login

1. Navigate to the login page.
2. Use a demo account or register.

5.2. Product Management

- Add/edit/delete products via the Products page.
- Real-time quantity updates after scans.

5.3. Inventory Alerts

- Set thresholds via item modal.
- View alerts in the dashboard and calendar.

5.4. Export/Import

- Go to Export page.
- Choose chart type or full data.
- Click download to export as CSV or PNG.

5.5. Dashboard Usage

- Monitor pie chart, alerts, and scanning activity.
- Use filters to query data.

6. Troubleshooting

- **Docker not running:** Make sure Docker Desktop is started.
- **Login issues:** Reset password from login screen.
